

Forest Ecosystems & Conservation Science - Professor Katherine Siegel**Opening: 1-2 PhD students**

Wildfires & forest ecology: Ongoing and planned research is assessing the effects of changing wildfire regimes on forest ecosystems' adaptations to climate change impacts (e.g., drought, fire).

Climate-adapted Forest management in protected areas: Current research is exploring protected area management in the context of climate-driven transformation of forest ecosystems in the Greater Yellowstone Area.

For more information, please contact Katherine Siegel (katherine.siegel@daniels.utoronto.ca) with your CV and a description of your areas of research interest.
